PROJECTS

Expense Tracker App
- An app that aims to help the user become aware of how to spend their money wisely because prices of commodities are continuously rising.
- A user can add, edit delete an income/expense and the user can see recent transactions. (CRUD functionality)
- Integrated a charting library(react-chartjs-2) to display data as pie graph.
- Created a component that tracks the budget remaining on a certain category and shows it as a progress bar.

Mini Restaurant app
- Express JS as backend framework
- JSON file used as database to Add, Edit, Delete menu/cart items.

To-do App
- Classic to-do app, retro-gaming style. Made using ReactJS.

Calculator
- Utilized DOM manipulations, event handlers, operators and data types, CSS for interface design.

Etch-a-Sketch
- Implementing drawing functionality by handling various user events. Attached event listeners to DOM elements that responds to user interactions.

Rock, Paper, Scissors
- Implementing game logic through looping of different functions such as scorekeeping, generating choices, etc.

Memory Game
- A mini-game made using vanilla JavaScript, made use of DOM manipulation and async functions to make buttons light up.

Landing Page
- A take on a landing page template, pure HTML and CSS.
